EDUCATION

Saint Martin's University - Lacey, WA Dean's List 2019-2024

M.S. Computer Science (May 2024) | B.S. Computer Science (May 2023)

Coursework: Data Structures & Algorithms, Database Management, AI, Cloud Computing, Cryptography

SKILLS

Languages: JavaScript, TypeScript, Python, C#, SQL, Java (coursework), HTML/CSS
Frameworks & Libs: React, Next.js, Node.js, Express.js, FastAPI, Flask, ASP.NET Core, Unity 3D
AI & ML: Claude, OpenAI and Gemini APIs, LLM agents and evaluation, PyTorch, Hugging Face, RAG
Tools: MongoDB, MySQL, SQLite, FFmpeg, Docker, Git/GitHub, GitHub Actions CI/CD, JWT auth, REST APIs, pytest, Jest

KEY ACCOMPLISHMENTS & PROJECTS

DentaVision *React, Node.js, Express, MongoDB, Claude AI* **denta-vision.vercel.app**

- Designed and built a dental treatment-planning web app that automates treatment plan intake and patient Q&A, a bottleneck I saw firsthand working in a dental practice's front office.
- Built a Claude Vision workflow that reads scanned treatment plans into CDT-coded procedures grouped by visit, with urgency and chair-time estimates, shown on an interactive SVG tooth chart.
- Implemented two-role JWT authentication and a Stripe subscription flow with signed webhooks and a billing portal (test mode, never processed a live payment); 20 Jest tests run in GitHub Actions on every push and gate the backend deploy.

Shorts Factory *Python, Flask, FFmpeg, Ollama (local LLM), FLUX/SDXL, YouTube Data API*

- Built an automated short-video pipeline in Python: it writes a script with a local LLM (Ollama), narrates it, sizes each caption to the measured audio and renders a 1080x1920 video with FFmpeg, with a Flask dashboard for reviewing each video and editing its title and description.
- Runs on one desktop GPU: a SQLite job queue and a machine-wide lock serialize render jobs, and uploads go out through the YouTube Data API into a booked publishing calendar.

Omnigent (open source) *Python, FastAPI, Pydantic, OpenAPI, Click, pytest* **4 pull requests**

- Contributed four pull requests (in review) to an open-source AI agent platform: a CLI option that attaches guardrail policies to an agent session, typed OpenAPI schemas for two REST endpoints, and a fix for a broken API-spec reference that I found and reported.
- Each ships a regression test that fails on the old code; the project's automated reviewer reproduced the schema bug independently.

EvalForge *Python, FastAPI, Next.js, TypeScript, PyTorch, Docker* **Source on GitHub**

- Built an open-source LLM evaluation platform (async FastAPI runner, Next.js dashboard) and trained and published a 184M-parameter preference reward model that reaches 0.7026 pairwise accuracy on held-out UltraFeedback pairs, against 0.6009 for a public 435M model on the same split.

Echoed Nights *Unity, C#, NavMesh AI* **Published on Steam**

- Shipped a commercial 3D game on Steam end to end, including the store's publishing requirements.

MedInsight API *Python, FastAPI, LangGraph, Docker, Terraform*

- Built a LangGraph ReAct agent with four tools over an encrypted document store (Fernet at rest, append-only audit trail); 40 pytest tests.

EXPERIENCE

Graduate Assistant / Teaching Assistant | Saint Martin's University 2023 - 2024

- Ran code reviews, pair programming and 1:1 debugging for 8+ students per semester; designed rubrics for data structures, graph algorithms and SQL.

Patient Care Coordinator (non-engineering) | Dental practice 2024 - Present

- Full-time role outside software engineering; all engineering work above was built independently alongside it.
