EDUCATION

Saint Martin's University - Lacey, WA

Dean's List 2019-2024

M.S. Computer Science (May 2024) | B.S. Computer Science (May 2023)

Coursework: Data Structures & Algorithms, Database Management, AI, Cloud Computing, Cryptography

SKILLS

Languages: JavaScript, TypeScript, Python, C#, SQL, Java, HTML/CSS

Frameworks & Libs: React, Next.js, FastAPI, Node.js, Express.js, ASP.NET Core, Prisma, EF Core, Unity 3D

AI & Cloud: Claude AI, OpenAI API, LangGraph, RAG, ChromaDB, Docker, Terraform, GitHub Actions (OIDC); AWS defined in Terraform, run against LocalStack

Tools: MongoDB, MySQL, SQLite, Git/GitHub, GitHub Actions, CI/CD, JWT Auth, REST APIs, Agile

KEY ACCOMPLISHMENTS & PROJECTS

reward-serve *Python, FastAPI, PyTorch, OpenTelemetry, Prometheus*

huggingface.co/DantheMan124

- Built a continuous-batching inference server for a DeBERTa preference reward model I trained and published, with per-request deadlines, cancellation, backpressure, graceful drain, OpenTelemetry tracing that links every request to the batch it rode in, and a written SLO with burn-rate alerts; 221 tests, CI green on Linux.
- Load-tested it across a 72-cell grid on a contention-gated machine: batching never pays on this CPU because forward time is super-linear in batch size (207 ms at batch 1 vs 7,431 ms at mean batch 18), so it ships with packing disabled and the queue, deadlines and drain kept.
- Measured int8 quantization on the model's own 1,987-pair eval split — 34.8% memory saved for 311 flipped preferences per 1,000 pairs — and ruled it out on ranking fidelity, not accuracy.

DentaVision *React, Node.js, Express, MongoDB, Claude AI*

denta-vision.vercel.app

- Designed and shipped a production dental SaaS that automates treatment plan intake and patient Q&A, directly solving the bottleneck identified from firsthand clinical experience as a Patient Care Coordinator.
- Engineered a Claude Vision API workflow to parse clinical images into dynamic CDT insurance codes and prioritized visit sequences rendered over an interactive SVG tooth chart.
- Implemented dual-role JWT authentication and a Stripe subscription integration with webhook-driven status sync, a self-serve billing portal, and subscription gating in auth middleware (wired end to end, never processed a live payment); 20 Jest tests gate every deploy through GitHub Actions CI/CD.

Shorts Factory *Python, Flask, FFmpeg, Gemini AI, FLUX/SDXL, YouTube Data API*

- Architected a 26-module autonomous content pipeline with a dynamic AI backend router that selects between Wan2.1 and FLUX models via a weighted quality-cost scoring model, plus a GPU arbitration layer that serializes contending render jobs on a single 24 GB card.
- Implemented a closed-loop intelligence layer wired into the pipeline: retention-curve analysis feeding prompt generation, competitor velocity scans injecting trending topics, and A/B thumbnail testing over the YouTube Data API.

Echoed Nights *Unity, C#, NavMesh AI*

Published on Steam

- Shipped a commercial 3D desktop game end-to-end, navigating full Steam publishing requirements to distribute the title to a global marketplace.

MedInsight API *Python, FastAPI, LangGraph, AWS ECS, Docker, Terraform*

- Defined AWS ECS Fargate infrastructure in four Terraform modules with an OIDC-authenticated GitHub Actions deploy pipeline requiring no long-lived keys; exercised the S3, DynamoDB, and KMS paths against LocalStack rather than a live account.
- Built a LangGraph ReAct agent with four tools over an encrypted document store, Fernet encryption at rest, and an append-only audit trail; 40 pytest tests cover auth, encryption, and the audit trail end to end.

EXPERIENCE

Patient Care Coordinator | 425 Dental

2024 - Present

- Observed how treatment plan inquiries and doctor escalation loops drained clinical resources; mapped these workflows directly into the product requirements for DentaVision.
- Generated monthly KPI analytics reports for executive leadership and managed patient scheduling workflows across a busy multi-provider practice.

Graduate Assistant / Teaching Assistant | Saint Martin's University

2023 - 2024

- Conducted technical code reviews, pair-programming modules, and 1:1 debugging sessions for 8+ computing students per semester, enforcing efficient object-oriented design patterns Designed rubrics for data structures, graph algorithms and SQL.
